Grow Your Practice – ICAI Workshop

Virtual CFO Services & Shared Services Ecosystem

Creating Scalable and Future-Ready CA Firms

The CA profession is witnessing a paradigm shift driven by globalisation, technology, and changing client expectations. This session focuses on how practicing CAs can move beyond traditional compliance services and build scalable, advisory-led practice models.

ICAI – Chennai Branch
10 February 2026

Presented By:
Girinath G Davey

SESSION AGENDA

This session aims to provide a strategic and practical perspective on building new-age CA practices.

We will discuss:

- Why the traditional CA practice model is under stress
- How SMPs can leverage global and domestic opportunities
- Understanding Virtual CFO services as a growth engine
- Creating value through strategic finance, governance, and reporting
- Building shared service ecosystems for scalability and profitability

The changing role of a CA

Historically, the role of a Chartered Accountant was centred around compliance, audit, and statutory reporting. While these remain essential, they are no longer sufficient to sustain long-term growth.

Today’s businesses expect their CA to:

- Interpret financial data, not just prepare it
- Act as a strategic advisor to promoters
- Support decision-making, not just compliance

The profession is shifting from transactional services to transformational value.

Why Traditional practice models are under pressure

Several structural changes are impacting traditional CA practices:

- Automation has reduced effort and fees in compliance work
- Increased competition from software-led platforms
- Clients compare services primarily on cost
- Difficulty in scaling due to partner dependency

As a result, firms relying only on time-based billing face stagnation.

Strategic opportunities for SMPs in a Globalised Economy

Globalisation has democratised access to clients.

Small firms can now:

- Serve overseas clients remotely
- Support Indian startups expanding globally
- Act as outsourced finance partners

Businesses increasingly prefer specialised, flexible, and cost-effective professional support, creating a major opportunity for SMPs.

Market Opportunity for CAs

India has over 6 crore MSMEs, and a significant portion operate without formal financial leadership.

Startup funding demands investor-ready reporting

Banks require structured MIS and forecasts

Foreign entities need India-compliant finance systems

This creates a long-term advisory opportunity, not a one-time engagement.

CA Advantage over consultants

Unlike consultants or outsourced accounting firms, CAs bring:

- Strong grounding in law, tax, and compliance
- Ethical responsibility and trust
- Ability to integrate finance, tax, and governance

This integrated skillset positions CAs uniquely to deliver Virtual CFO and outsourced finance services effectively.

From SMP to scalable CA Firm

Scalability requires a mindset shift.

Key differences:

- Individual-driven → Process-driven
- One client at a time → Multiple clients simultaneously
- Unpredictable income → Recurring revenue

Firms that fail to adopt scalable models risk long-term stagnation.

What is a Virtual CFO?

A Virtual CFO functions as a strategic finance leader working remotely or part-time.

Key characteristics:

- Focus on forward-looking decisions
- Works closely with promoters and management
- Provides structured financial discipline

The role complements internal teams rather than replacing them.

Key responsibilities of a Virtual CFO

Typical responsibilities include:

- Preparing annual budgets and rolling forecasts
- Monitoring cash flows and working capital cycles
- Analysing business performance and trends
- Supporting key strategic and operational decisions

This involvement elevates the CA’s role significantly.

Scope of Virtual CFO Engagement

The scope varies based on client maturity.

Common inclusions:

- Monthly MIS and review meetings
- Budget vs actual analysis
- KPI dashboards for management
- Oversight of compliance and financial controls

Engagement depth increases as trust builds.

Virtual CFO Engagement Models

CA firms can design flexible models:

- Fixed monthly retainer for ongoing support
- Tiered packages based on complexity
- Project-based engagements for fundraising or restructuring

This flexibility improves client adoption and retention.

Monetisation & Pricing

Unlike compliance work, Virtual CFO services should be priced based on value delivered.

Best practices include:

- Outcome-oriented pricing
- Clear scope definition
- Periodic pricing review

This improves margins and avoids commoditisation.

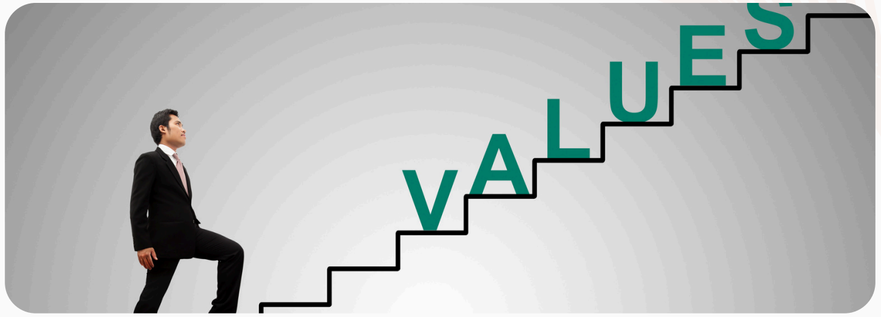
Ideal Client Profile

Virtual CFO services work best for:

- Businesses with growing complexity
- Promoters who value professional advice
- Organisations preparing for funding or expansion

Client selection is critical to success and satisfaction

Moving from reporting to Value creation.



Financial reports alone do not create value.

The Virtual CFO’s role is to:

- Convert data into insights
- Highlight risks and opportunities
- Recommend actionable steps

This shift strengthens long-term client relationships.

Strategic finance value areas

Virtual CFOs contribute across:

- Cost and margin optimisation
- Pricing and product mix decisions
- Capital allocation and funding strategy
- Growth and expansion planning

These are high-impact, high-value services.

Governance & Control frameworks.

Strong governance improves credibility.

Virtual CFOs help implement:

- Structured MIS and reporting
- Internal controls and SOPs
- Compliance calendars
- Risk management frameworks

This is especially critical for investor-facing companies.

Client impact of Virtual CFO services

Clients typically experience:

- Better financial discipline
- Improved cash flow management
- Reduced compliance surprises
- Higher confidence in decision-making

This leads to long-term engagement and referrals.

Positioning CA Firms for outsourced finance

Outsourced finance allows firms to move from task execution to ownership of finance functions.

Benefits include:

- Preparing annual budgets and rolling forecasts
- Monitoring cash flows and working capital cycles
- Analysing business performance and trends
- Supporting key strategic and operational decisions

This model strengthens client stickiness.

What is a shared services Ecosystem?

A shared services ecosystem centralises routine finance operations.

Key elements:

- Standardised processes
- Common technology platform
- Centralised teams
- Partner-level oversight

This enables scalability without proportional cost increase.

Services ideal for Shared Services

These services are repeatable and process-driven.

Accounting and bookkeeping

Payroll processing

GST, TDS, ROC compliances

MIS and reporting

Benefits of shared services model

Key benefits include:

- Cost efficiency
- Improved quality control
- Faster turnaround times
- Higher margins

This model reduces operational stress on partners.

Typical shared services Team Structure

A well-defined structure includes:

- Partners handling strategy and client relationships
- Managers ensuring quality and reviews
- Executives handling execution
- Technology supporting automation

Clear roles ensure consistency and scale.

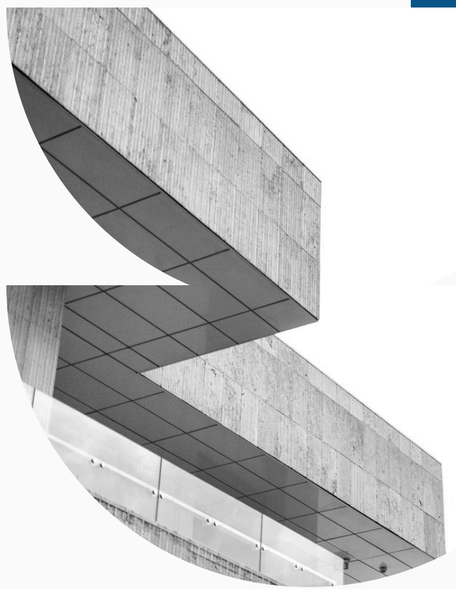
Technology as a Key Enabler.

Technology acts as a force multiplier.

Critical tools include:

- Cloud accounting software
- Workflow and automation tools
- MIS dashboards
- Secure document management systems

Technology enables scale without compromising quality.



Step by Step Implementation Roadmap

A phased approach is recommended:

- Identify niche and target segment
- Design service offerings
- Document processes
- Build and train teams
- Gradually onboard clients

Start small, scale steadily.

Common challenges & Solutions

Challenges are inevitable.

Common issues:

- Client resistance to pricing
- Dependence on key individuals
- Quality control at scale

Solutions lie in education, systems, and review mechanisms.

DOS & DON'TS

Do:

- Focus on long-term value creation
- Build systems early
- Invest in people and technology

Don’t

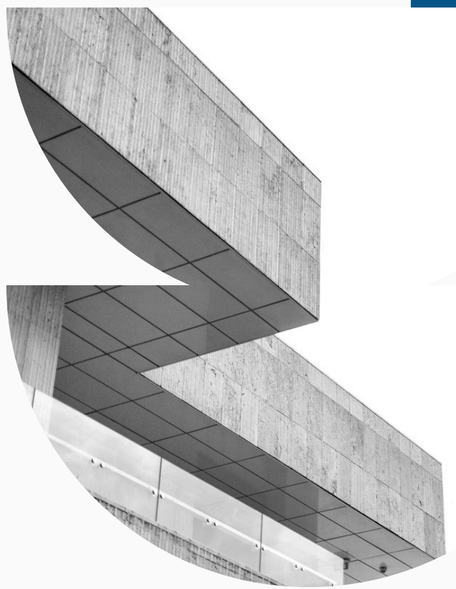
- Compete only on price

The Future of CA Practice

The future CA firm will be:

- Advisory-led
- Process-driven
- Technology-enabled
- Globally connected

Virtual CFO and shared services will form the backbone of sustainable practices.



Key Takeaways

- Virtual CFO services offer high-value growth opportunities
- Shared services enable scale and profitability
- CAs are uniquely positioned to lead this transformation
